

# Omnipliance®

Omnipliance Ultra and the new Omnipliance Virtual are the most powerful and versatile network performance monitoring and investigation solutions for your Enterprise network.

## What's New in Omnipliance

- **Omnipliance Virtual introduced**

For the first time, Omnipliance Virtual™ provides you with a virtual version of the powerful Omnipliance Ultra™ hardware appliance. Do almost everything an Omnipliance Ultra does, but with reduced IT operating expenses since the more affordable Omnipliance Virtual is easier to deploy and doesn't consume resources such as power and rack space.

- **Spotlight capabilities included but disabled by default**

Use Spotlight™ for web-based network monitoring, using a single capture for both monitoring and packet storage.

- **WiFi analysis included with Omnipliance Ultra C110**

Built into the Omnipliance Ultra C110 is the capability to capture tunneled wireless traffic from WLAN controllers, enabling you to monitor, analyze, store, and troubleshoot multi-Gigabit speed 802.11ac traffic.

- **Support for new packet capture adapters for Omnipliance Ultra**

New two-port packet capture adapters with 40G and 100G interfaces allow flexibility for capturing packets from any of your network interfaces.
